# Internal VAPT Program for Corporate's and Everyone

In this world of IT Security everyone now knows what is VAPT and now we very well know why it is important ... We are now starting a new programme which we have included new features for the Customer to take full advantage of our Services at a very Low and minimal cost ...

If you have already done your VAPT exercise you have done your homework and we are happy since you understand what IT Security is and its importance ...

We have designed this programme in such a way that even if you have done your VAPT exercise this programme is going to help you find out unknown Vulnerabilities in you Network on weekly basis and give you a comprehensive REPORT and aware you of the same ...

What we will be covering in this VAPT is as follows :
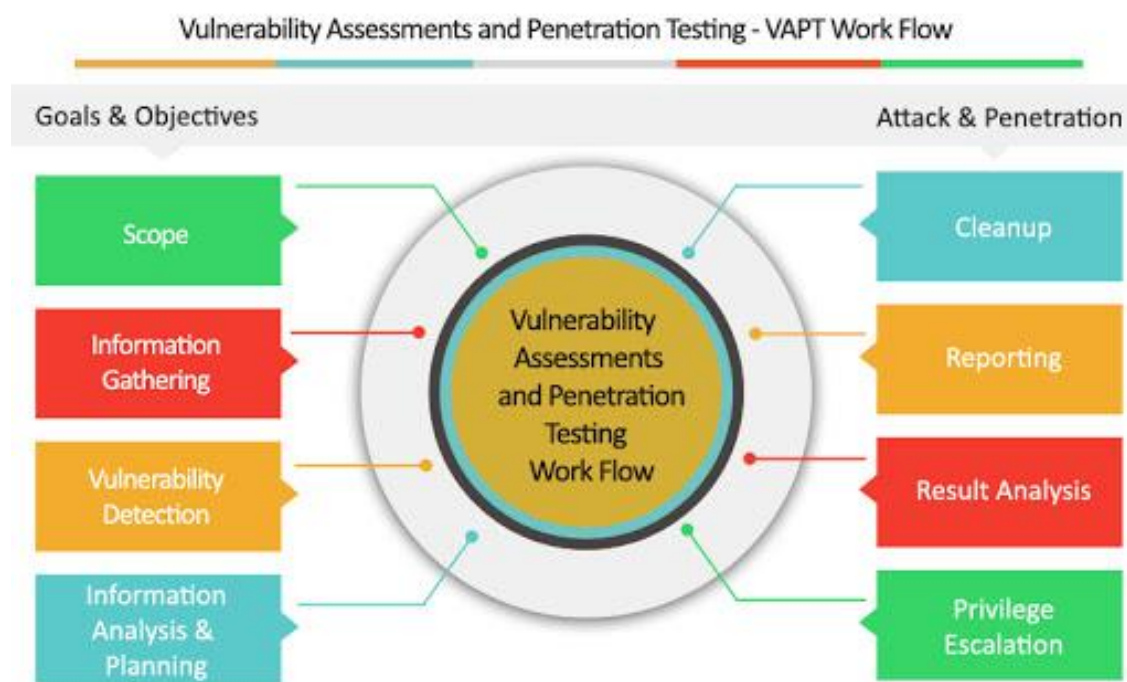

- All of your Network Devices (Firewall, Switches, Routers, SIP)
- All your Desktop and Laptops
- All your Servers (Application, Database, Active Directory, FTP, Proxy, Load Balancers, etc.)
- All your IOT devices
- And all your devices which have an IP Address

How this is different from your Traditional VAPT Program :

- We do not **compete** with other vendors instead we try to **learn their way of doing** Vulnerability Assessment and add their Techniques to do our testing in a more powerful way.
- We do follow **traditional** way of doing Vulnerability Assessment and Penetration Testing but **add to it we have our own written Tools** with which we do the testing.
- We do testing using traditional way but also use **MACHINE LEARNING** additional to our tests wherein we bypass any hurdles like **FIREWALLS AND WAF**'s which restrict our testing.
- We do not rely on a single tool to do the testing but we almost have more than **20 to 25 tools** each for **different scenario** and **different technologies**.
- Our Reporting Module are **very strong** where we have different type of Reports for **Technical Staff** as well as for the **Management.**
- We try and do **continuous** testing for the same IP / Hostname to get accurate results.
- To accomplish all our goals we use MITRE Framework to do testing which has been recognized world wide.
- We come up with new updated Tools from the Open Source Technology which are hosted on **GITHUB** and tools which are published in **DEFCON**.
- We closely follow tools written my **TRUSTED SEC** which is the worlds best company for IT Security Solutions and are **PIONEERS** in this field.
- We will try to emulate movements made by professional hackers like **Lateral Movement, C&C Servers, Remote Logins, Reverse Shells, Back-doors** and many more.

Advantages Of Our Program

To handle your VAPT Program we will be installing and implementing a Management Framework to keep track of your Vulnerabilities and its Remediation which is as follows |
**We will manage this for your, we will also train you ...**
Link for the Framework and a small screenshot of the same :

Pre-Requisites

Either a Bare Metal Hardware or a VM Instance with following configuration

CPU	-	i5 at least 4th Generation / VM Instance
Cores	-	Minimum 4 cores
RAM	-	8 GB + 8 GB for DefectDojo
HDD	-	Minimum 300 GB (Recommended SSD for better Performance)
Network Adpt	-	1 No
OS	-	Kali Linux (We will install and configure)
Static IP	-	1 Public IP
Open Ports	-	1194 (1194 is required for OpenVPN)
Type of VA	-	White Box Testing require IP Schema + IP Description

Services Offered For The Period Of

1 Year

Price

Pricing is a big catch here but our pricing does not depend upon number of devices nor upon the time effort since this activity is for 1 year ... Please call +91 9930787952 or Email us on indranil.kamulkar@kakitsecurity.com / indranil.kamulkar@gmail.com / indranil.kamulkar@protonmail.com for pricing ... This service will be free for our existing customers hence please do not put your queries ...
